

# KAM-LOK® HAND SAWS

## The Finest Cutting Instrument of Its Kind

### Hand Crafted Using the Finest Materials

KASCO Kam-Lok professional butcher saws have been hand-crafted since 1909 using the finest materials available. We start with high quality stainless steel bar stock, then precision cut, shape and form it into the butcher saw frame. Holes are drilled and the frame is then manually buffed and polished to a reflective finish. Every Kam-Lok lever is individually formed and adjusted before attaching to its frame. The high strength polymer handle is then attached. A quality KASCO blade is then installed and the butcher saw is ready for final inspection, packaging and delivery. Don't settle for less than a Kam-Lok butcher's hand saw - the quality standard for over 120 years!

### Pistol-Grip Handle

Your hand wraps firmly, comfortably, naturally around the contours of the pistol-grip handle. Made of non-porous, virtually indestructible plastic that repels meat acids, stains and bacteria. All Kam-Lok saws clean quickly and easily for a more sanitary operation.

### Alignment

You note the precision alignment from grip to tip that makes the most exacting cuts smooth, clean and effortless.

### Kam-Lok Lever

With a flip of the wrist you unlock the Kam-Lok saw, switch blades, and re-lock the lever that always maintains just the right amount of blade tension automatically.

### Replacement Blades

KASCO SharpTech replacement blades for Kam-Lok saws are superbly engineered and precision manufactured to assure they meet the same high standards as the frame. Only the hardest spring-tempered steel available is used. Teeth are precision ground for maximum sharpness and the set is controlled to exact tolerances for fast, easy cutting. The thin slot of the frame keeps the blade rigid and stable, insuring straight cuts.

*Aluminum and stainless steel Kam-Lok® handsaw frames and replacement blades are available in a variety of sizes from 17-1/2" to 30".*
